Tony and I have been part of the Conflux community for at least one and a half years. I noticed his presence in 2022 as we both seemed to be early adopters in the same ecosystem developments and often found ourselves in the similar situation of providing information to later adopters. I highly value Tony's contributions to our community as he is an early adopter of new tech and projects, contributes to community thought leadership, and provides technical support to the community.

Tony is quick to provide information to users in the ecosystem. He often contributes to answering general information requests and excels specifically at providing thorough and thoughtful explanations that anyone can understand when queries are technical in nature.

He has been a specifically helpful contributor in our sub-communities related to PoW mining, running PoS node instances, EVM specifics, nodeJS, and explaining the intricacies of both general blockchain concepts and Conflux specifics in a simple and digestible manner.

We have both participated in community development events and I am always happy to see his presence knowing that he will benefit the community while improving his own knowledge portfolio. We both participated in the Conflux Developer Workshop 2023.

We had the opportunity to meet in-person this past fall at EthGlobal NYC. It was a treat to meet him after interacting online for so long and I was inspired by his ability to network and willingness to jump into understanding new projects and technologies. In my mind Tony exemplifies all the characteristics a project can hope for in a community member and has the skills required to both develop his own blockchain software as well as explain blockchain interactions to users of all knowledge levels.

Sincerely,

GLM (Erik)
